

TRIANGLE INFOSEC CON 2026 • LEADERSHIP TRACK

When Everything Depends on Everything

What breaks when security fails in cascades, not silos.

Mike Faas • Fractional CTO/CISO

01 / THE BOARD

**“I can describe each square. I can’t tell you what happens
when one of them fails.”**

01 / THE BOARD

Eight grades. Zero lines between them.

We score security like it's complicated. It isn't.

01 / THE BOARD

Security doesn't fail in silos. It fails in cascades.

Three failures · the math · a graph · Monday

CIS • NIST • ISO • PCI • SOC 2

02 / THE THESIS

Decompose. Score each part. Add it up.

Eight domains. Eight dashboards. Eight budgets. Zero connections.

Vendor risk

Incident readiness

A cascade is a dependency.

Square B needs square A to work.

depends on →

When A fails, B fails for A's reason.

Pull one node. The web moves.

Governance

It isn't one of eight. It's what the eight are standing on.

**Security doesn't fail in silos. It fails in
cascades.**

02 / THE THESIS

You're not failing. The model you were handed
is.

Governance: **B**. Not “weak.” Absent.

→ Audit finding

→ New engineer gets everything

→ No plan when someone clicks

→ "Describe your third-party risk program."

→ Nobody classified anything

03 / THE B IN GOVERNANCE

Same gap. Different hats.

05 / THE B- IN GOVERNANCE

One gap. Five squares. The grade said medium
five times.

03 / THE ROOM

How many SaaS integrations hold tokens to your data warehouse right now?

03 THE ROOM

How many of those does your security team know about?

03 / THE ROOM

It's a cascade you haven't drawn yet.

05 / THE GRAPH

A graph. Not a spreadsheet. Not a maturity model.

05 / THE GRAPH

Sidekick Security · Trust Map

12 domains · 102 practices · 772 dependencies

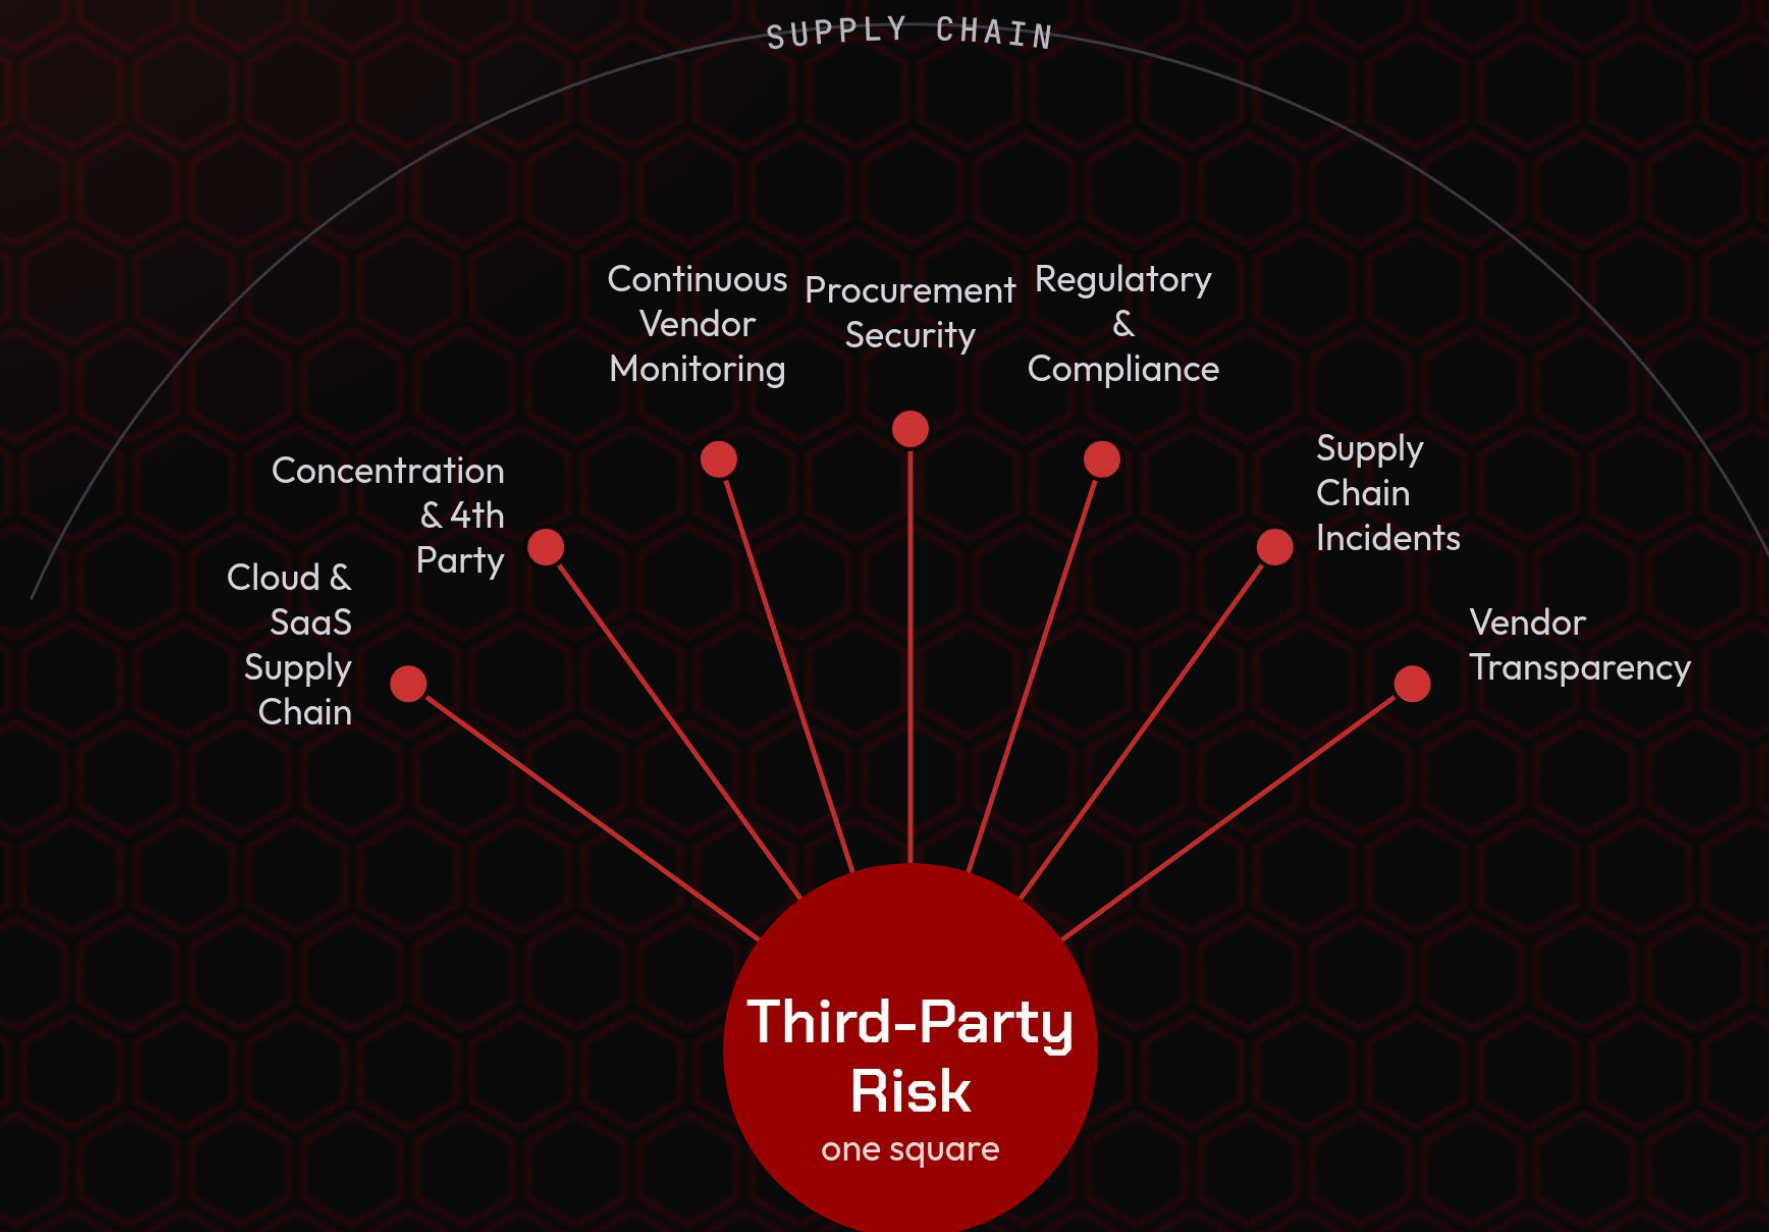

05 / THE GRAPH

Same edges. Read backwards.

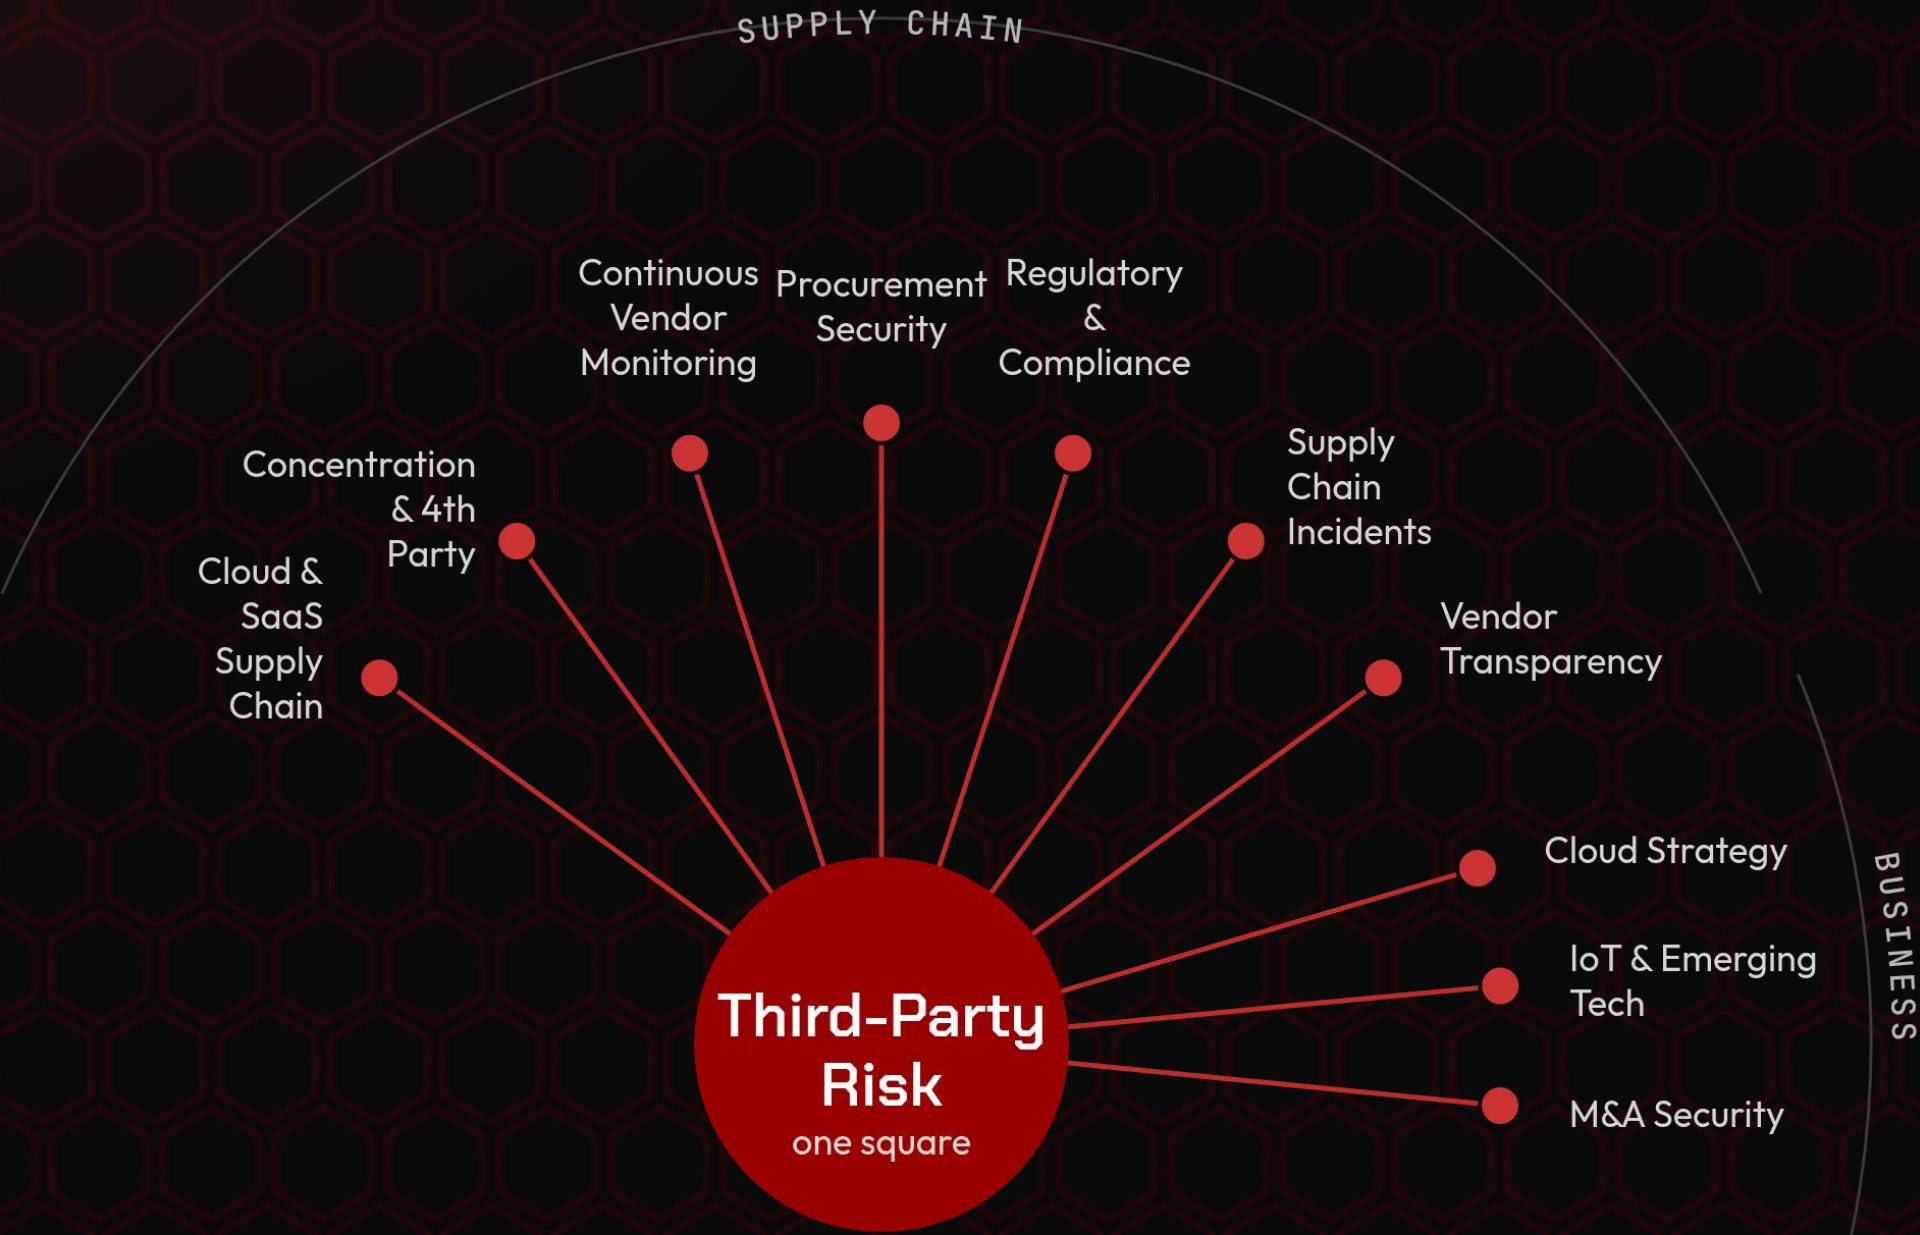

One square on the board.

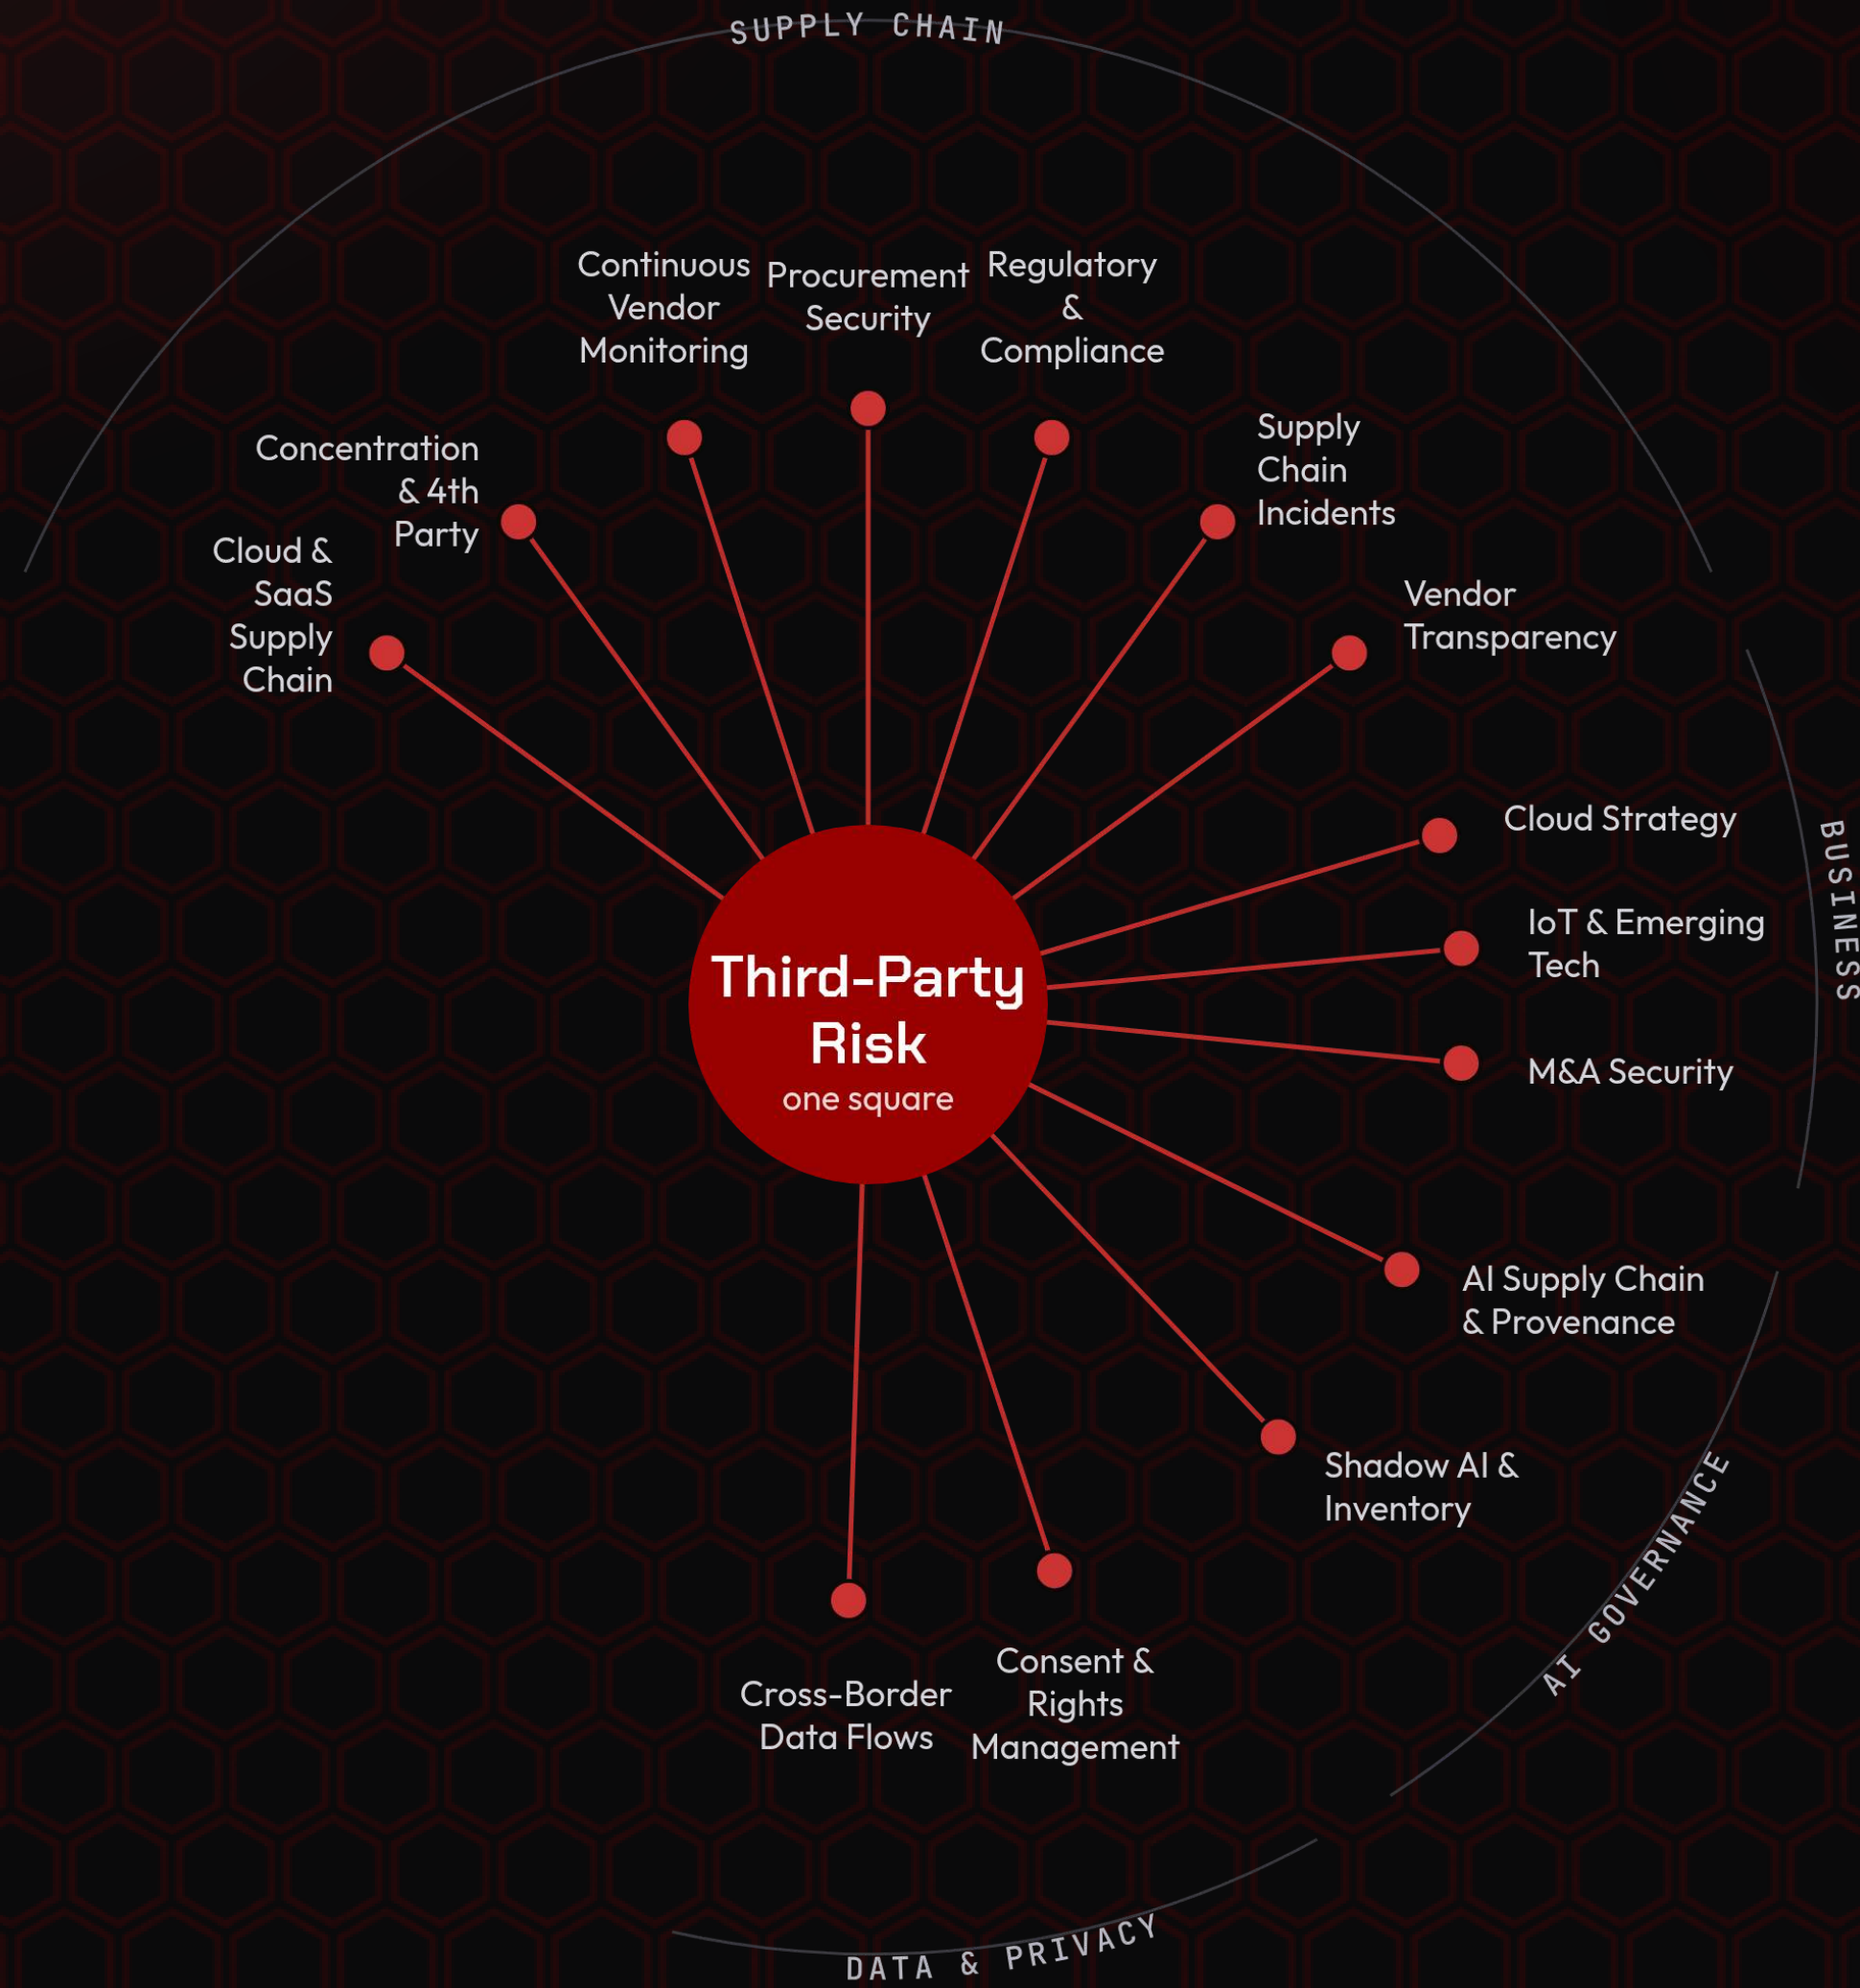

7 so far · 1 domain

10 so far · 2 domains

14 so far · 4 domains

19 practices fail for its reason · 8 domains

19 practices fail for its reason · 8 domains

Why, in their words

SSO & FEDERATION → DEPENDS ON THIRD-PARTY RISK

“Third-party vendor access often requires federation: TPRM must evaluate vendor identity practices.”

LEGAL & DATA GOVERNANCE → DEPENDS ON THIRD-PARTY RISK

“Vendor contracts and data processing agreements are negotiated through legal.”

CLOUD & HYBRID ARCHITECTURE → DEPENDS ON THIRD-PARTY RISK

“Cloud vendors are third parties: their security posture must be assessed through TPRM.”

M&A SECURITY → DEPENDS ON THIRD-PARTY RISK

“Acquired company's vendor relationships become your third-party risk.”

46 so far · 6 domains

76 so far · 12 domains

76 practices hang from it · all 12 domains · next most-connected: 34

THE EIGHT MOST-DEPENDED-ON PRACTICES
05 / THE GRAPH

1	Policies & RACI	76
2	Risk Assessment & CRQ	34
3	Compliance & Audits	27
4	Frameworks & Standards	25
5	Strategy & Alignment	24
6	Data Governance & Classification	22
7	Threat Detection & SOC	22
8	Vulnerability Management	21

The domain I'd spent the least time on is the one everything hangs from.

05 / THE GRAPH

Version one. Every edge counts the same.

It's the structure, not your assessment.

06 / MONDAY

Monday.

MONDAY 06 / MONDAY

1. Draw one edge.

MONDAY 06 / MONDAY

1. Draw one edge.

Hand it to the owner at the other end. Ask: did you know?

MONDAY 06 / MONDAY

1. Draw one edge.

Hand it to the owner at the other end. Ask: did you know?

2. Find the tokens.

Two lists. The difference is your Anodot.

MONDAY 06 / MONDAY

1. Draw one edge.

Hand it to the owner at the other end. Ask: did you know?

2. Find the tokens.

Two lists. The difference is your Anodot.

3. Change the board slide.

From “are we secure” to “what fails first.”

MONDAY 06 / MONDAY

1. Draw one edge.

Hand it to the owner at the other end. Ask: did you know?

2. Find the tokens.

Two lists. The difference is your Anodot.

3. Change the board slide.

From “are we secure” to “what fails first.”

06 / MONDAY

Complicated systems, you optimize. Complex systems, you govern.
